

$$(BASE + OFFSET) == (BASE | OFFSET)$$

Fig. 1**Fig. 2****Fig. 3**

Original Data

```

1 Access Address A[i][0]
2 Access Address A[i][1]
3 Access Address B[i][0]
4 Access Address B[i][1]
5 Access Address B[i][2]
6 Access Address B[i][3]
7 Access Address A[i][0]
8 Access Address A[i][1]

```

Pseudo code sequence of accessing A, B, C

FIG. 4A**FIG. 4B**

Data in local memory

```

Set the base address to A[i][0]
Access Address A[i][0] (A[i][0]+0)
Set the base address to A[i][1]
Access Address A[i][1] (A[i][1]+0)
Set the base address to B[i][0]
Access Address B[i][0] (B[i][0]+0)
Set the base address to B[i][1]
Access Address B[i][1] (B[i][1]+0)
Set the base address to B[i][2]
Access Address B[i][2] (B[i][2]+0)
Set the base address to B[i][3]
Access Address B[i][3] (B[i][3]+0)
Set the base address to C[i][0]
Access Address C[i][0] (C[i][0]+0)
Set the base address to C[i][1]
Access Address C[i][1] (C[i][1]+0)

```

Pseudo code sequence of
accessing A, B, C with
initialization code of local
memory based address inserted

FIG. 5A**FIG. 5B**

Fig. 6

```

Compute the GEN, KILL, IN, and OUT for each flow node, fill in the hash table {base address, set of offset value pair}
for (each base address in the hash table)
  VAR is the variable accessed by the base address
  for (each offset value pair for this base address)
    int CURR_VAR_ALIGN = current alignment of VAR
    int CURR_BASE_ALIGN = current alignment of the base address
    if (CURR_BASE_ALIGN does not satisfy the condition in Figure 1 for one of the offset value in the pair)
      int NEEDED_BASE_ALIGN = the minimum base address alignment needed to satisfy the condition in Figure 1 for
      all offset values in the pair
      int new_align = CURR_VAR_ALIGN * NEEDED_BASE_ALIGN / CURR_BASE_ALIGN
      if (new_align <= MAX_ALIGN(VAR))
        set the alignment of VAR to new_align
        if (the alignment change does not make the base address satisfy the condition in Figure 1 for all offset values in
        the pair)
          restore VAR's alignment to CURR_VAR_ALIGN
        end if
      end if
    end if
  end if
end if
  
```
